Work Experience

PayPal: Software Engineer 2 San Jose, CA May 2018 - Present

- Working on internal container orchestration platform using Mesos, Aurora and Docker.

PayPal: Software Engineer Intern - Admin Server & Dashboard in Go San Jose, CA June 2017 - Sep. 2017

- Built API gateway for internal **container orchestration** platform using **Go**. Deployed in production on **Mesos** using **Docker**.
- Enhanced dashboard using **Angular 4**, used by operation team to troubleshoot Java, Node app and manage cluster itself.
- Introduced full text search using **Solr**, wrote and **open sourced** Go client with enhanced performance and SolrCloud support.

GitCafe: Software Engineer Intern Shanghai, China Jan. 2015 – Mar. 2015

- Reduced **Ruby on Rails** application load time by 5% through optimizing regular expression in markdown parser.
- Fixed user subsubcription logic, solved 20% pricing related user tickets.

Dongyue Web Studio: (Part-time) Full stack web developer & Tech lead Shanghai, China Sep. 2013 – Jan. 2016

- Led web and mobile team. Refactored online ticket booking application tongqu.me in 3 month, used by 20,000 students .
- Built high traffic website and REST API using **PHP** and **MySQL**, reduced database contention using job queue and cache.
- Utilized **Redis** as cache and rate limiter, increased QPS by 120%, reduced database load by 40%, filtered out most bot traffic.
- Refactored jQuery codebase using AngularJS, increased homepage loading speed by 60% using Ajax and pre-render.

Project Experience

Distributed database benchmark framework github.com/benchhub UCSC Nov. 2017 – Present

- Designed a specification for running distributed database benchmark.
- Built a scheduler to run distributed database and workload generators.
- Stored benchmark results in time series databases and relation databases.

Distributed Time Series Database github.com/xephonhq/xephon-k UCSC Nov. 2016 – Present

- Implemented a distributed time series database on top of Cassandra in Go. Support both JSON and Protobuf via HTTP/2.
- Designed a columnar format modeled after Parquet and InfluxDB with higher compression and less write amplification.
- Created benchmark suite for Xephon-K, OpenTSDB, KariosDB, InfluxDB and a generic client for different TSDB.
- Surveyed popular TSDB design and implementation, made an interactive online report called awesome-time-series-database.

GPU accelerated in-memory time series processing github.com/at15/ts-parallel UCSC Apr. 2017 – June 2017

- Expanded benchmark suite for different C++ GPU computing framework on CUDA and OpenCL, Thrust, Boost, ArrayFire.
- Implemented OLAP queries like top-K, group by for multi dimensional time series data on both CPU and GPU backends.

Distributed systems monitoring prototype Shanghai Jiao Tong University Mar. 2015 – Jan. 2016

- Enhanced monitoring system for distributed system using Cassandra and MongoDB written in Java and C++.
- Deployed in China Telecom's Kafka cluster, detected anomaly in disk and memory usage, improved capacity planning.

Education

MS. Computer Science	University of California Santa Cruz	GPA 3.9	Sep. 2016 – Mar. 2018
BS. Materials Science	Shanghai Jiao Tong University	GPA 3.3	Sep. 2012 – June 2016

Skills

Language	Go, Java, C++, JavaScript, Python, SQL, PHP, Shell
Database	Cassandra, MySQL, Elasticsearch, MongoDB, Redis, KairosDB, OpenTSDB, InfluxDB, Prometheus, Graphite
DevOps	Docker, Kubernetes, Mesos, Aurora
Framework	Angular, Laravel, Spring, Dropwizard, Express, Rails, CUDA, Hadoop
