WORK EXPERIENCE

Google: Software Engineer - EDA Farm Sunnyvale, CA May 2019 - Present

- Go and Python ?

PayPal: Software Engineer 2 - Multi cluster container orchestration platform in Go San Jose, CA May 2018 - May 2019

- Working on internal **multi cluster** container orchestration platform using Apache **Mesos**, Aurora and Docker.
- Built REST API and cli tools in Go for collecting log and metrics along with **distributed tracing**.
- Introduced new deploy strategy and implemented dynamic internal system check during deploy.

PayPal: Software Engineer Intern - Admin Server & Dashboard in Go San Jose, CA June 2017 - Sep. 2017

- Built API gateway with RBAC for internal container orchestration platform using Go.
- Enhanced dashboard using Angular 4, used by operation team to troubleshoot Java, Node app and manage cluster itself.

Dongyue Web Studio: (Part-time) Full stack web developer & Tech lead Shanghai, China Sep. 2013 – Jan. 2016

- Led web and mobile team. Refactored online ticket booking application tongqu.me in 3 month, used by 10,000 students.
- Built high traffic website and REST API using PHP and MySQL, reduced database contention using job queue and cache.
- Utilized Redis as cache and rate limiter, increased QPS by 120%, reduced database load by 40%, filtered out most bot traffic.

PROJECT EXPERIENCE

Go util library collection github.com/dyweb/gommon Open source side project March. 2018 – Present

- Built a high performance logging library with fine grained log level control across library dependencies.
- Merged template rendering, static asset embedding into a single generator library as replacement for `go:generate`.

Distributed database benchmark system github.com/benchhub UCSC Nov. 2017 – March. 2018

- Designed a specification for running distributed database benchmark.
- Built a queue based scheduler to run distributed database and workload generators.
- Stored benchmark results in time series databases and metadata in relation databases.

Distributed Time Series Database github.com/xephonhq/xephon-k UCSC Nov. 2016 – Present

- Implemented a distributed time series database on top of Cassandra in Go. Support both JSON and Protobuf via HTTP/2.
- Designed a columnar format modeled after Parquet and InfluxDB with higher compression and less write amplification.
- Created benchmark suite for Xephon-K, OpenTSDB, KariosDB, InfluxDB and a generic client for different TSDB.
- Surveyed popular TSDB design and implementation, made an interactive online report called awesome-time-series-database.

GPU accelerated in-memory time series processing github.com/at15/ts-parallel UCSC Apr. 2017 – June 2017

- Expanded benchmark suite for different C++ GPU computing framework on CUDA and OpenCL, Thrust, Boost, ArrayFire.
- Implemented OLAP queries like top-K, group by for multi dimensional time series data on both CPU and GPU backends.

EDUCATION

MS. Computer Science University of California Santa Cruz GPA 3.9 Sep. 2016 – Mar. 2018

BS. Materials Science Shanghai Jiao Tong University GPA 3.3 Sep. 2012 – June 2016

SKILLS

Language Go, JavaScript, Java, C++, Python, SQL, PHP, Shell
Database Cassandra, MySQL, Elasticsearch, MongoDB, Redis, KairosDB, OpenTSDB, InfluxDB, Prometheus, Graphite
DevOps Docker, Kubernetes, Mesos, Aurora
Framework Vue, Angular, Laravel, Spring, Dropwizard, Express, Rails, CUDA, Hadoop
